
Accuracy versus how many genes / edges a cutoff keeps
coloured = co−expression selection, every grid setting; grey circles = TargetScan's own top−K at the same K (same x)
genesdplyr::selected (K)
Spearman with accuracy: all −0.00 | induced −0.13
genesdplyr::selected (% of candidates)
Spearman with accuracy: all −0.00 | induced −0.13
edges (number)
Spearman with accuracy: all 0.17 | induced 0.14
edges (% of all pairs)
Spearman with accuracy: all 0.17 | induced 0.14
rho vs GFP fluorescence (induced cells)
